

M SATHIESH

Systems Engineer NOC and Production Support

Incident Management | Monitoring and Automation

Bengaluru, India | +91-9071276172 | sathieshlingam16@outlook.com

Professional Summary

NOC and Production Support professional with 6+ years of experience providing **NOC, Production and Non-Production Support** across IT infrastructure and application environments. Experienced in **Major Incident Management, Problem Management and Change Management**, applying proactive and reactive approaches to incident resolution, recurring problem prevention and controlled change execution.

Strong background in high-severity incident response, monitoring, troubleshooting, service-impact assessment, SLA management, stakeholder communication and cross-functional coordination. Hands-on experience with Azure Portal, AKS monitoring, Splunk, Splunk Observability, Check_MK, AppDynamics, PRTG, SolarWinds, Park My Cloud, IBM Turbonomic and ServiceNow.

Developed operational automation using Python, PowerShell and Power Automate, including Splunk log reporting, multi-server service checks, Excel and OneDrive processing, recurring operational workflows and React/HTML-based health dashboards.

Core Skills

Production Support	NOC Support, Production Support, Non-Production Support, Major Incident Management, Incident Management, Problem Management, Change Management, Proactive and Reactive Operations, Incident Triage, Troubleshooting, Root Cause Analysis, Escalation, SLA Management, Deployment Support, Patch and Maintenance Support, Health Checks
Monitoring and ITSM	Splunk, Splunk Observability, Check_MK, AppDynamics, PRTG, SolarWinds, Park My Cloud, IBM Turbonomic, ServiceNow, Log Analysis, Alert Investigation, Infrastructure Monitoring, Application Monitoring, Capacity and Performance Monitoring
Automation and Development	Python, PowerShell, Power Automate, React, HTML, CSV Reporting, Excel and OneDrive Automation, Operational Workflow Automation
Cloud and Infrastructure	Microsoft Azure, AKS Monitoring, Azure Alerts, Azure Logs, Resource Troubleshooting, Windows Server, Networking Fundamentals
Foundational Technology	Ubuntu/Linux, SSH, UFW, Docker, Portainer, Git/GitHub, MySQL Fundamentals, SQL Fundamentals, Cybersecurity/SOC Fundamentals

Professional Experience

INFOSYS

April 2022 – Present

Systems Engineer – NOC / Incident Management

Bengaluru, India

- Provide **NOC, Production and Non-Production Support** for infrastructure and application environments within a 24x7 operational support model.
- Manage **Major Incidents and P1/P2 incidents**, assessing business impact, coordinating resolver teams, leading incident bridge calls and driving timely service restoration while maintaining SLA commitments.
- Apply proactive and reactive approaches to **Incident and Problem Management**, analyzing recurring incidents, monitoring trends and supporting corrective and preventive actions.
- Perform **Problem Management** activities by reviewing recurring incidents, operational symptoms and monitoring data, supporting root-cause investigations and coordinating corrective actions.
- Perform **Change Management** across production and non-production environments, coordinating deployments, patching, scheduled maintenance and controlled changes.
- Apply proactive change practices by assessing service impact, dependencies and operational risks before implementation, while supporting reactive or emergency changes when required.
- Monitor infrastructure and application environments using **Splunk, Splunk Observability, Check_MK, AppDynamics, PRTG, SolarWinds, Park My Cloud and IBM Turbonomic**, investigating alerts, performance indicators and service-health conditions.
- Analyze monitoring information, infrastructure/application alerts and exported Splunk logs to support incident triage, troubleshooting, service-impact assessment, problem analysis and operational reporting.
- Perform Azure Portal monitoring and preliminary troubleshooting across production and non-production environments, including alert review, log analysis and resource-level investigation; escalate issues requiring elevated access to the Azure support team.
- Manage incidents, problems and changes through **ServiceNow**, maintaining operational records, escalation details, implementation information and stakeholder communications.
- Coordinate cross-functional technical teams during critical service disruptions and provide structured updates to application teams, infrastructure teams, management and client stakeholders.
- Prepare incident reports, service-impact communications, problem-related analysis and productivity reports while supporting continuous improvement of operational processes.

- Developed **PowerShell automation** to extract operational values from Excel files stored through OneDrive and present processed information through an operator-friendly output interface.
- Developed **PowerShell automation** to check and start selected or multiple Windows services across different servers from a jump server.
- Developed a **Python utility** to process exported Splunk logs and generate CSV reports of server reboot activity for recurring operational analysis.
- Created **Power Automate workflows** to track selected operational email categories for long-term analysis and archive reports received through email.
- Developed a **React-based Health Check Dashboard** to replace a daily Excel-based application and infrastructure health collection process, adding search, RED/AMBER/GREEN status categorization and CSV export.
- Developed an **HTML-based PULSE dashboard prototype** covering application health, critical jobs, major issues, deployment status and nightly refreshes using email-derived information and exported JSON data.

Previous Experience

SYMBIOTIC AUTOMATION SYSTEMS PVT. LTD.

June 2020 – March 2022

Project Engineer

- Troubleshoot industrial automation systems and resolved technical issues across client environments.
- Performed programming, system testing and technical troubleshooting for industrial automation projects.
- Investigated system issues and implemented corrective actions while supporting project delivery and technical quality.
- Collaborated with cross-functional teams to resolve automation-related issues and support successful client project execution.

Selected Technical Projects

Operational Health Check Dashboard

React, HTML, Operational Monitoring

Developed a web-based health-check dashboard to replace a daily Excel-based application and infrastructure health collection process. Implemented searchable data views, RED/AMBER/GREEN status categorization and CSV export for operational and management visibility.

NOC Server Service Automation

PowerShell, Windows Server, Jump Server

Developed PowerShell automation to check and start selected services across multiple servers from a jump server, supporting repetitive operational service-management activities.

Splunk Server Reboot Reporting

Python, Splunk Export, CSV

Developed a Python utility to process exported Splunk logs and generate structured CSV reports of server reboot activity for recurring operational reporting.

Automated Operational Workflows

Power Automate, OneDrive, Email

Created Power Automate workflows for tracking selected operational emails and archiving reports received through email. Integrated OneDrive-hosted Excel data with PowerShell processing for recurring operational tasks.

Certifications and Training

Certifications: Microsoft Certified: Azure Fundamentals (AZ-900) | Microsoft Certified: Security, Compliance, and Identity Fundamentals (SC-900)

Training: ITIL Awareness | Data Privacy Compliance | Agile Operations | Privacy by Design | Cybersecurity in SDLC | Python | SQL | PowerShell | Networking | Windows Administration | ServiceNow

Education

Birla Institute of Technology and Science, Pilani

2025 – Present

B.Tech. in Artificial Intelligence and Machine Learning

MN Technical Institute

2016 – 2019

Diploma in Electronics and Communication
